The escalating and unpredictable cost of oil, the concentration of major oil resources in the hands of a few politically sensitive nations, and the long-term impact of CO 2 emissions on global climate constitute a major challenge for the 21 st century. They also constitute a major incentive to harness alternative sources of energy and means of vehicle propulsion.

Increased renewable energy generation and a decrease in battery storage costs have led to a stronger global focus on energy storage solutions and grid flexibility services. Energy storage offers an opportunity to identify the most cost-effective technologies for increasing grid reliability, resilience, and demand management.
