

How do I configure Huawei smartlogger?

The deployment wizard allows you to configure basic SmartLogger parameters, connect Huawei devices, power meters, and EMIs, configure Huawei NMS, and implement interworking with third-party devices. Log in as Advanced User or Special User to access the deployment wizard page. Set parameters as prompted. For details, click Help on the page.

Is Huawei liable if the smartlogger is faulty?

Huawei shall not be liable for any consequence caused by the violation of the safety operation regulations and design, production, and usage standards. Only certified electricians are allowed to install, connect cables for, commission, maintain, troubleshoot, and replace the SmartLogger. Operators need to meet the following requirements:

What is Huawei smartlogger Deployment Wizard?

Huawei will not be held liable for any losses resulting from improper password management. Context The deployment wizard allows you to set basic SmartLogger parameters, connect Huawei devices, power meters, and EMIs, configure Smart PCS, Huawei NMS, and third-part NMS, and implement interworking with third-party devices.

Why is my Huawei smartlogger not working?

Contact the supplier or Huawei technical support. The cable between the device and the SmartLogger is loose or disconnected. The device is powered off. The baud rate or RS485 address of the device is changed. The device is replaced. The device is removed and not reconnected. Check the cable between the device and the SmartLogger.

The management system or independent power adjustment device sends scheduling commands over the communications port that supports Modbus TCP, GOOSE, or IEC 104, without the need of user configuration or operation. The SmartLogger can automatically switch between scheduling modes and send scheduling commands.

The electric power industry is closely related to a country's national interest and security as well as its people's livelihoods. As the key infrastructure of electric power systems, electric power communication networks must therefore be secure and reliable, in order to guarantee the secure and stable running of those systems.

Power input Supports two AC inputs Rated voltage: 200V-240 V AC/100V-120 V AC Rated frequency: 50 Hz/60 Hz Power output Output voltage: 42V-58 V DC (rated voltage: 53.5 V DC) Output power of two power supplies: 2000 W (176V-300 V AC); 940 W
