

What is one Sun ONE World one grid & green grids initiative?

"The One Sun One World One Grid and Green Grids Initiative is an idea whose time has come. If the world has to move to a clean and green future, these interconnected transnational grids are going to be critical solutions," said PM Modi during his speech in Glasgow. What is OSOWOG?

Why is one Sun one world and one grid important?

These factors include: The move towards One Sun, One World, and One Grid signifies a pivotal future for renewable energy systems. This project plays a crucial role in fostering international collaboration, enabling the balanced and shared use of renewable energy sources globally.

How will the Global Solar Grid be implemented?

According to the ISA's concept note on OSOWOG, the global solar grid will be implemented in three phases. In the first phase, the 'Indian Grid' will interconnect with the Middle East, South Asia and Southeast Asia grids to share solar and other renewable energy resources for meeting electricity needs, including during peak demand.

What is the Green grids initiative?

The Green Grids initiative (GGI) was launched by the United Kingdom (UK). This initiative intends to create a framework for international collaboration on the optimal use of renewable resources to ensure that clean and efficient energy is a reliable alternative for all countries to meet their energy requirements by 2030.

Can India connect solar energy supply across borders?

India had first proposed connecting solar energy supply across borders at the International Solar Alliance in 2018 to allow parts of the world with excess renewable power to send power to other countries.

How has solar energy changed in India?

At present the installed renewable energy capacity has increased by two and half times, standing at 141 GW. This period also saw exponential growth in solar energy capacity which increased by over 15 times and now stands at 41.09 GW. Why is investing in solar energy important for India?

India has enormous solar energy potential. India produces around 5,000 Tn kilowatt hour(kWh) per year of energy, and solar photovoltaic (PV) power is effectively harnessed. Solar enables power generation on a distributed basis and has an advantage for rural and urban electrification. The solar energy sector supports the government's aim for

One-Earth, One-Family and One-Future, India under its G20 presidency highlighted the importance of transnational grid Interconnections in enhancing energy security, fostering economic growth, and facilitating universal energy access for all, in affordable, reliable and sustainable manner which will accelerate integration of Renewable Energy
