Under IRENA's "1.5°C Pathway", 90% of the solutions shaping a successful outcome in 2050 involve renewable energy through direct supply, electrification, energy efficiency, green hydrogen and bioenergy. To be in line with the 1.5 scenario, by 2030 renewable power should reach 8 000 GW globally, almost tripling the current capacity.

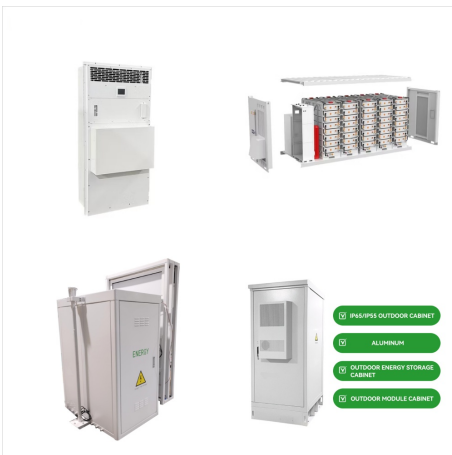

ASME Energy Sustainability (ES) Conference brings together scholars and practitioners in a wide range of energy sustainability fields. The conference highlights advances in research and design of sustainable and innovative energy technologies from building to utility scales as well as society-level energy analyses and solutions.
