

Is the Isle of Man a gas-fired power station?

This power station is the only gas-fired power station operating on the Isle of Man. With an expected retirement year of 2035, the government of the Isle of Man is working to phase out all fossil fuel fired power generation by 2040.

Where does the Isle of Man electricity come from?

The majority of the Isle of Man's electricity is currently sourced from fossil fuels. The interconnector is a source of carbon neutral electricity on island and also provides a route to export electricity to the GB Market.

How will the electricity sector change in the Isle of Man?

As the uptake for electric heating and electric vehicles increases, the electricity sector will have to grow to meet future demand. The majority of the Isle of Man's electricity is currently sourced from fossil fuels.

Does the Isle of Man need a new interconnector?

Balancing the Isle of Man's electricity network requires stabilising power; this cannot be provided from sources which are reliant on the weather to produce electricity as these sources cannot be guaranteed at all times. In all scenarios the most cost-effective solution of providing this stabilising power is a new interconnector to the UK.

Does the Isle of Man import energy from the UK?

The Isle of Man currently imports all of its energy from the UK (with the exception of what is produced from Sulby). In all future models, the Isle of Man remains dependent on GB for the provision of baseload. This is the case even where capacity is increased by building excess renewables, as the stabilisation is still provided by interconnectors.

Can electricity be decarbonised on the Isle of Man?

Electricity generation is responsible for approximately 33% of all greenhouse gas emissions on the Isle of Man, and a majority of this is currently sourced from fossil fuels (natural gas). Without the decarbonisation¹ of electricity, it will not be possible to reduce carbon emissions significantly in other areas such as heating and transport.

This means that you will not need a converter or transformer but just a travel adaptor, because Isle of Man operates on a 240V supply voltage, which is within the 110-240V range that the dual voltage appliance operates on. Single voltage rated appliances. In ???

Although emissions from fossil fuels are the main cause of climate change, there has also been publicity on the potential of offshore gas in the Isle of Man. Exploration wells have been drilled ???

The Manx Utilities Authority (MUA) is a Statutory Board of the Isle of Man Government. It was formed on the 1st April 2014, and took over the functions of the now defunct Manx Electricity Authority (and the IOM Water & Sewerage Authority).
