What planets are in our Solar System?

Label the Planets in Our Solar System (*Include the Dwarf Planet) ©Sheri Amsel Color the Planets in Our Solar System ©Sheri Amsel Venus Mars Jupiter Saturn Earth Uranus Neptune Pluto Sun Mercury

What makes up the Solar System?

The solar system comprises the sun and the assembly of bodies orbiting it, including moons, planets, asteroids, meteoroids, and comets. The word 'solar' comes from 'sol,' a Latin word for sun. Our solar system has a central star the sun. It is a monster; in fact it makes up 98% of the matter in our solar system.

What types of bodies are in the Solar System?

Our solar system comprises the sun and the many bodies orbiting it, such as planets, dwarf planets, satellites, asteroids, comets, and meteoroids. These bodies are bound to the sun by gravity and differ in shape and size, ranging from giant planets to small meteoroids.

How many planets are in the Solar System?

The gravity created by the large body exerts itself on the 8 planets that rotate around it in orbits. The solar system is thought to have formed 4.6 billion years ago. The closer a planet is to the sun, the hotter the average surface temperature on the surface of it. Each of them has a bit of personality itself.

Very simple worksheet I made including the sun and the 8 planets (roughly) to scale. Pupils can label and colour in the planets and sun. Can be easily differentiated by either writing the names of the planets on the board, adding the first letter of the planet to the text boxes, leaving it as is, or just having the sun and asking pupils to draw the planets and label them.
