The potential for solar energy in Latvia remains largely untapped, according to Alnis Bēliņš, Head of Riga office in European Energy: "Electricity production from renewable resources in Latvia has seen significant growth in recent years, but the momentum gained so far is not enough, and there is still too little solar and wind energy in

When constructed, this solar project has an installed capacity of 115 MW. It is poised to become one of Latvia's largest solar parks, marking a significant milestone in the nation's transition towards a sustainable future. The solar park is scheduled to be connected to the Latvian grid by 2025.

Increasing energy performance of a Liepaja Municipal Police office building and installing solar thermal collectors (Liepaja, Latvia) Location of the building

Latvia Solar PV Project is a ground-mounted solar project. The project is expected to generate 64,000MWh electricity and supply enough clean energy to power 30,000 households. Development status Post completion of the construction, the project is expected to get commissioned in 2025. For more details on Latvia Solar PV Project, buy the profile

The focus of that mission is on less developed countries, in which the organization's field offices are often located. These areas tend to be without access to large-scale electrical grids, meaning that on-site generators use fossil fuels to produce electricity, and power outages are common.

Additional solar distribution sales offices in the neighbouring countries of Estonia and Lithuania are expected to follow, further establishing the company's wholesale business presence in the region. We regard the Baltics as a region with huge untapped potential ??? the PV market in Latvia for example is expected to grow by more than 30%
