

Will Thailand increase reliance on renewables?

Thailand plans to increase reliance on renewables, particularly solar, wind and biomass, as alternatives to gas. This will see an expected 5.5 GW of renewable energy capacity growth by 2030.

Where will Thailand's wind market be located?

Wind is expected to be predominantly located in the South and Northeast Thailand, with most tenders centred around onshore wind. Thailand's current wind market, much like solar, is dominated by local players backed by large energy conglomerates.

Is wind a good investment in Thailand?

Higher feed-in-tariffs compared to those offered for other renewable technologies position wind as an attractive play in Thailand, with IRR as high as 10% to 11%. Thailand also boasts a unique opportunity in biomass energy generation, with the significant agricultural industry providing the region's most developed biomass supply.
