

How much does a Megapack project cost?

The price goes down considerably for a bigger project. For example, a 10-Megapack project costs \$19,235,700. With 38.5 MWh of capacity, the price per kWh goes down to \$500. The price goes down to \$475 per kWh for even larger 100+Megapack projects, which are actually becoming quite common.

Why is Tesla increasing the price of the Megapack?

Tesla is significantly increasing the price of the Megapack - its utility-scale battery pack - as the backlog of new orders extends into 2023. Back in 2019, Tesla launched the Megapack; it was Tesla's third stationary energy storage product after the Powerwall and Powerpack.

How much does Megapack installation cost in California?

For a single, two-hour Megapack unit, for example, installation brings the total estimated cost to \$2,081,060 in California, adding \$802,200 in installation costs.

How much energy does a Megapack store?

Details on the Megapack have been in short supply up until now since, unlike the more consumer-focused Powerwall, the Megapack has largely been a business-to-business product. A single Megapack energy storage unit can store up to 3.0 MWh of energy -- equal to approximately 220 Powerwalls, and deliver a whopping 0.8 MW of power.

How much energy does a Tesla Megapack have?

Tesla has recently updated its Megapack configurator (hat tip to u/space\_s3x) to now list 3.9 MWh capacity. That's about 50% more energy capacity in a single Megapack, but the battery system is now 6-ft longer and 60% heavier at 83,996 lbs. It would indicate that while the energy capacity has increased, the energy density of the Megapack went down.
