

The Power Grid system is all-inclusive with the 7730 Power Grid controller and the 7720 dedicated Power Grid-7 ignition box. The Power Grid will control the functions of all other MSD ignitions, but it was designed around the 7720 advanced ignition. MSD says previous units were rated at 190 millijoules vs. Power Grid's 200 millijoules.

Make sure to have this system ready before starting the installation. Wiring Harness: The system requires a wiring harness to connect all the components together. It is recommended to use the MSD

Sorry for the basic question Just installed the grid system and using the rpm/time wire to activate my shifter (powerglide) "ON" rpm is set for 7000 what would be the best rpm for the off rpm so it doesn't miss a shift or hold my shift solenoid on so long higher or lower rpm then 7000 and will it catch it on the down swing of the shift rpm drop if set lower ?

In fact, every NHRA Pro Stock Championship in the last few years has been with an MSD Programmable 7. Drag radial, twin turbo outlaw cars, and 10.5 tire classes all rely on the advanced programming of MSD 7

MSD Power Grid system controllers are the brains behind the entire Power Grid system, and they can be used with any MSD ignition or Pro Mag to provide advanced ignition tuning capabilities. While they're compatible with all MSD ???

The Power Grid takes the place of the MSD Pro Mag Digital Timing Control and Graphic Editor, which was a bit cumbersome with an outdated hand-held touchscreen display. Those timing controls were implemented midway through the previous decade in response to escalating speeds and a couple of high-profile fatalities on the track.

The new MSDView4.2.3 has fixed some problems I had with trying to enter time value numbers in the 1.15 range in Launch Retard. Also, in the 1.6.0 and later Firmware versions, MSD changed the Output Switch time settings that were originally 0.00 to only 0.0 .

The MSD Power Grid System Controller uses a high speed RISC microcontroller to control the ignition's output while constantly analyzing the various inputs such as launch, burnout, and step wires; trigger signals, rpm, and CAN-Bus data. The high speed controller can make extremely quick updates to the ignition output,

Need to know for sure if the MSD Power Grid System Controller (#7730) and MSD Digital-6 Plus will work together. I have the Digital-6 Plus box and looking at buying the Power Grid System Controller if it will work with my current ignition box. Does anyone know or know of a buddy using one with his Digital-6 Plus box (and without a crank trigger)?
