

What is the Ministry of energy in Myanmar?

Ministry of Energy was formed on 1985 April (12) by Council of State. In 2016, union government combined Ministry of Electric Power and Ministry of Energy as Ministry of Electricity and Energy. The Ministry of Energy, Myanmar initially focused on developing the country's oil and gas sector, which was the most important source of energy at the time.

What is happening in Myanmar's power sector?

Myanmar's power sector has been severely affected by the ongoing political turmoil. The power sector has been spiralling downwards since 2021 with prolonged electricity blackouts throughout the country. Electricity generation has been declining, resulting in a widening power supply-demand gap.

Does Myanmar have a power supply gap?

Myanmar's power sector will likely continue to experience significant challenges. To sustain the current level of power supply would require adding 300-500 MW every year until 2030. Scenario analysis on the power supply-demand gap illustrates that available generating capacity is projected to not meet the growing demand.

Can power trade and imports help ease power shortages in Myanmar?

While power trade and imports could help ease the electricity supply shortages, it remains challenging under the current political circumstance in Myanmar. Myanmar's power sector continues to record losses due to a combination of several factors, including currency depreciation, increasing grid maintenance cost, and revenue decline.

Is there a reliable assessment of current and future electricity demand in Myanmar?

Currently, there is no robust and credible assessment of current and future electricity demand in Myanmar.

What happened to Myanmar's hydropower in 2022?

Four hydropower units had to be temporarily disabled for maintenance operations in mid-2022, including Myanmar's second biggest dam, Shweli-1. This further reduced available capacity and resulted in an acute electricity shortage during the dry season from January to May 2023.

This is the first time LNG being used as the fuel source in power generation in Myanmar. The power station, with an installed capacity of 477.1 MW, was built on a fast-track basis for one of the Myanmar Government's shortlisted critical projects to boost power supply for summer 2020. The project was awarded to the consortium of VPower Group

The power cut lasted nearly nine hours. Today, electricity went off at 10 am, and it is not yet back," the source said. In Yangon, blackouts are normally shorter in the monsoon season, when hydropower dams deliver power. In Myanmar, 40 percent of domestic power production is generated by hydropower. Monsoon power is, however, insufficient.
