

Half-cell solar modules have solar cells that are cut in half, which improves the Solar Module`s performance and durability. Traditional 60-cell and 72-cell Solar Panels will have 120 half-cut cells and 144 half-cut cells, respectively. When solar cells are halved, their current is also halved, so resistive losses are lowered and the solar cells can produce more power.

Half-cut (HC) cells Half-cut means that modules consist of 120 smaller instead of 60 larger cells. In a traditional silicon cell-based PV module, the ribbons interconnecting neighboring cells can cause a significant loss of power during the current transport.

Traditional full-cell panels are made with 60/72 cells on the entire panel. In a half-cell or half-cut module, the number of cells on the entire panel is doubled into 120 or 144 cells per panel. The panel is however the same size as a full-cell panel but with double the number of cells. The goal of the new technology is to lower the resistance of the panel and increase the ???
