

Do you need a battery backup?

One important part of your plan should be considering battery backups--also known as an uninterruptible power supply, or UPS--which will automatically take over when the power drops or goes out entirely. But no one solution's perfect for everyone.

Does a UPS battery backup need to power up?

Unlike a backup generator, it does not need to power up in order to start generating power. In other words, if you experience a power outage in your area, your machinery should not shut down if it is plugged into a UPS battery backup.

Can a UPS battery backup cause a power outage?

In other words, if you experience a power outage in your area, your machinery should not shut down if it is plugged into a UPS battery backup. Many models of uninterruptible power supply (UPS) also provide surge protection. A surge protector blocks spikes in voltage so that they do not harm your electronics.

What makes a good UPS battery backup?

Even if you're not prone to power outages, many UPS models also include surge protection features. An automatic voltage regulator smoothes over brownouts and spikes without needing to change your battery. It's one of several capabilities you'll want to look for in the best battery backups.

Do you need a battery backup if you have a generator?

So, your battery backup is always at work, protecting your desktop computer, network equipment, or other electronic equipment and charging its battery when not in use. While UPS power is great for avoiding a sudden shutdown, you should not expect it to power your equipment for long hours without additional electrical backup, such as a generator.

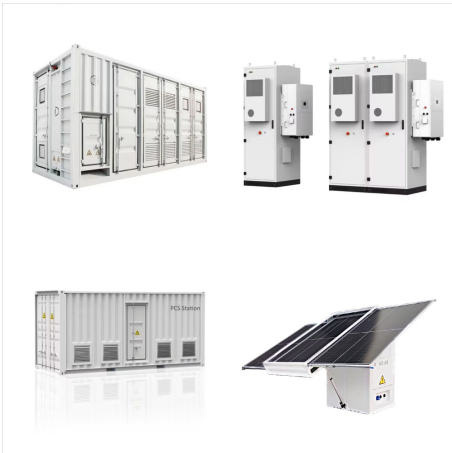

Do you need a battery backup if you lose power?

Losing power is stressful, so don't let your offline router and computer add to it. The best battery backups can give you peace of mind that your electronics aren't in the dark while you call the electric company. Some might need a more powerful and versatile solution--particularly if you're looking to back up the equipment in
