

Does North Korea have energy security challenges?

Access to solar panels has created capacity where the state falls short, but the overall energy security challenges facing the nation are daunting. This report, "North Korea's Energy Sector," is a compilation of articles published on 38 North in 2023 that surveyed North Korea's energy production facilities and infrastructure.

How much energy does North Korea use?

North Korea is a net energy exporter. Primary energy use in North Korea was 224 TWh and 9 TWh per million people in 2009. The country's primary sources of power are hydro and coal after Kim Jong Il implemented plans that saw the construction of large hydroelectric power stations across the country.

Does North Korea have a two-tier energy system?

Under North Korea's two-tier energy system, which prioritises industrial facilities, the only way for many citizens to access electricity is to pay state functionaries to allow them to install cables to siphon off power from local factories.

Does North Korea have a power shortage?

Preface North Korea suffers from chronic energy shortages. Rolling blackouts are common, even in the nation's capital, while some of the poorest citizens receive state-provided electricity only once a year.

Does North Korea have a thermal power plant?

But the two diverge on assessments of the country's thermal power production capacity, which consists mostly of coal-fired power plants. Statistics Korea estimates thermal power stations in North Korea supplied 11.2 TWh of electricity in 2020, while Nautilus estimates this at just 3.3 TWh.

Can solar power solve North Korea's energy problems?

Jeong-hyeon, a North Korean escapee, told the Financial Times that many residents in Hamhung, the second-most populous city, "relied on a solar panel, a battery and a power generator to light their houses and power their television". But solar power is still only a partial solution to the country's energy woes.
