In the new picture from the telescope's Near-Infrared Camera (NIRCam), four of Saturn's rings shine brightly, with the planet itself appearing dimmer. Three of its moons can be seen as

Following in the footsteps of the Neptune image released in 2022, NASA's James Webb Space Telescope has taken a stunning image of the solar system's other ice giant, the planet Uranus. The new image features dramatic rings as well as bright features in the planet's atmosphere. The Webb data demonstrates the observatory's unprecedented sensitivity for the ???

This animation depicts Jupiter's planet wrapping cloud structure, commonly referred to as "belts" and "zones," and the jet streams that Jupiter, its Great Red Spot and three of its four largest satellites are visible in this photo taken Feb. 5,

Dwarf planet Ceres is the largest object in the asteroid belt between Mars and Jupiter, and it's the only dwarf planet located in the inner solar system. Explore Ceres. Pluto Facts. Pluto was long considered our solar system's ninth planet. But it was reclassified as a dwarf planet in 2006 by the International Astronomical Union.

The three images together show the full extent of a continuous swath of dark terrain that wraps around much of Pluto's equatorial region. The western end of the swath (right image) breaks up into a series of striking dark regularly-spaced spots, each hundreds of miles in size, which were first detected in New Horizons images taken in late June.
