

Planets Visible Tonight. Discover the planets that are currently visible in the night sky. Learn about their positions, rise and set times, and how to spot them from your location. Whether you're a seasoned astronomer or just starting out, this guide will help you make the most of your stargazing experience.

The planets today shows you where the planets are now as a live display - a free online orrery. In this solar system map you can see the planetary positions from 3000 BCE to 3000 CE, and also see when each planet is in retrograde.

To verify if a specific planetary alignment is entirely observable from your location, download the Sky Tonight app. Select the desired date using the app's time machine at the top of the screen, and explore the view of the sky for your precise location.
