

Take a photographic tour of the solar system. From their backyards, amateur astronomers have captured planet pictures that feature red Martian deserts, Jupiter's stormy cyclones, and Saturn's spectacular rings. Each of the planets presents a photographic opportunity and a peek at another world: Saturn's mysterious rings shine even for small scopes, though better equipment reveals ???

? Located at the centre of the solar system and influencing the motion of all the other bodies through its gravitational force is the Sun, which in itself contains more than 99 percent of the mass of the system. The planets, in order of their distance outward from the Sun, are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Four planets??? Jupiter through ???
