

Most residential wind turbine generators on the market use permanent magnets within their turbine generator design, and which creates the required magnetic field with the rotation of the machine, although some do use electromagnetic coils. Although not yet as popular as gas generators or even solar panels, wind energy has recently become one of the most in-demand backup power technologies in the residential market. Homeowners see it as a cost-effective alternative to grid power. Moreover, wind generators are long-term investments that can last several decades. Of course, the price issue

However, if you're lucky enough to live in an area that's generous with wind speeds consistently over 2.5 m/s, then you're in luck. The Pikasola 400 watt wind turbine produces 400 watts of power at a wind speed of approximately 18 meters/second.

One of the most popular types of vertical wind turbines is the Savonius turbine. This type of turbine is relatively easy to build and maintain, and can be used in a variety of different applications. There are three main locations for camping - in the woods, near a river or lake, and in an open field. If camping in the woods, a fuel-based portable generator may be the right option to recharge any devices that will be used during the camping trip, as there may not be adequate sunlight or wind in the forest to use solar panels or wind turbines
