The Precision Circuits Power Management System flashed on and indicated 30 amps then promptly cut off my life sustaining air conditioning. I thought, what the heck! I turned the dryer, washer, and water heater breakers off and the PCPMS promptly indicated 50 amp service and went back to sleep. 2 minutes later the AC came back on.

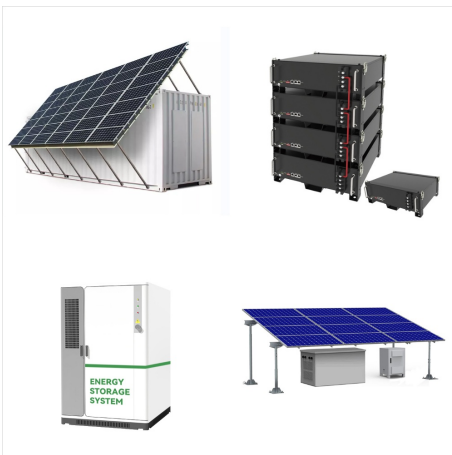

The PCS Monitor displays pertinent Power Control System status information. The UP and DOWN buttons are used to step through each individual Screen of information. The Power Control System is manufactured by  
Precision Circuits Inc. Here are the features right  
out of the manual; 1) Monitor and manage total RV  
current to avoid nuisance circuit breaker tripping. 2)  
Manage power no matter what the source: 50amp  
Service, Generator, 30amp service, 20amp service.  
(20amps, they have got to be kidding)

Re: Power control system Precision Circuits I added to Jerrod's thread title and looking to see some additional info. The PCS, I see it works in unison with a Magnum inverter for supplemental power, but there is no mention if this is any ???

Product Features and Function The MIDI-Power Control System (MIDI-PCS) is a fully automatic Power Control System that requires little to no user interface. The display is there to help the RV user understand power management and the function of the MIDI-Power Control System (MIDI-PCS). Precision Circuits Inc, 2538 Wisconsin Ave, Downers
