Designed to optimize pedestrian traffic flow and enhance overall user experience, automatic doors are equipped with various sensors and mechanisms that work in tandem to detect an approaching individual, allowing the door to open smoothly and then close securely behind them.

Electric Power Door is a member of the Iron Mining Association of Minnesota. EPD vertical lift doors do not use springs. Torsion and coil springs are common trouble areas on roll-up and overhead sectional doors. EPD's cable and counter-balanced operating mechanism out-performs a spring balanced system.
