Question 6. 6. Point out the correct alternative: (a) When a conservative force does positive work on a body, the potential energy of the body increases/decreases/remains unaltered. (b) Work done by a body against friction always results in a loss of its kinetic/potential energy.

Find power solutions designed to endure. With products designed to outlast even the harshest conditions, we can help your electrical power systems stay protected and connected. Energy Solutions. Innovative solutions to connect and protect the power grid with insights from our experts for tough engineering challenges. Contact Our Team ??? 24

Upon buying solar panels from Power Energy Solutions we were told that they were going to install an x number of solar panels on our roof as agreed upon on the proposal; however, during the installation, they installed less without discussing with us. Had we known, we would've said no to the install and the whole thing.
