Photovoltaic solar panels are a sustainable source of renewable energy for most businesses and commercial buildings. Commercial solar, when installed on the roof, will help protect the roof. The panels will deflect heat in the hot summer months, and help retain heat in the cold winter months. The roof will be less exposed, making it last longer.

Commercial solar panels typically have higher wattage than residential panels because they need to meet larger energy demands. The wattage of each panel can range widely, but commercial panels are often found in the range of 300 to 400 watts per panel.

Most commercial and industrial solar installations are substantially larger than a typical residential solar power system. For perspective, the average size of a residential solar panel system is around 10 kilowatts (kW), while a commercial solar energy system can be up to several megawatts (MW), depending on the electricity needs of your company.

Commercial solar panels, also commonly known as "Commercial & Industrial-scale solar (C&I)", like residential solar panels, are photovoltaic panels that absorb sunlight for power generation. These are mostly grid-tied solar systems, that are in turn used to power office buildings, schools, warehouses, factories, and more.

When the property owner also owns the solar panels, lenders should treat the solar array similarly to any other asset or fixture owned by the property owner. The lender should file a Uniform Commercial Code-1 (UCC-1) fixture on the solar array, which empowers lenders to seize subject properties if the customer defaults on payments.
