

We are a stocking distributor of Batteries, Solar and Power Conversion products serving key markets like Transportation, Solar, Renewable Energy, Motive power, Critical and Residential Back up Power. When you have questions, our energy experts have the answer! The Hub Power team has over 30 years of experience in our product and market categories.

The Ministry of Defence of Slovenia has initiated the Defence Resilience Hub Network in Europe (RESHUB) project, which aims to establish self-sufficient energy hubs in Slovenian military barracks.

It plans to install 150 MW of batteries and 50 MW electrolyzers for the production of hydrogen by 2035. Of note, the HSE group currently manages power plants with a total capacity of 2,000 MW. The most important facilities are hydropower plants and the coal-fired power plant ? o??tanj (TE?).

Adex Group is becoming the most liquid spot power trading hub in the area. Over 60 members trade electricity at BSP and SEEPEX spot markets. The trading volume at Adex Group's markets for the year 2023 amounted to ???

Slovenia generated 68.8% of its electricity with zero carbon or carbon neutral sources in 2019, dominated by nuclear power and hydroelectricity. Fossil fuels oil, coal, and natural gas contributed 61% of the total energy supply of Slovenia in 2019.

The focus on solar thermal energy and energy efficiency lowers carbon emissions and creates more self-sustaining housing units. Ljubljana's approach to retrofitting public housing and focusing on social equity within the climate resilience framework is a good practice for mid-sized cities with a significant portion of public housing.

HSE opened a 3MW solar facility in Prapretno. It presently produces more than 10MWh per day on average. Holding Slovenske Elektrarne (HSE), a state-owned electricity producer and trader in Slovenia, opened a 3MW solar facility in Prapretno, central Slovenia, in a formerly-occupied state area used for the deposition of fly ash and slag from a thermal power plant.

Western Green Energy Hub, a proposed renewable energy plant to be constructed in Australia, has undergone a capacity upgrade and will now produce 70 GW of power instead of the previously planned 50 GW. When ready, the project will be spread out over an area larger than the countries of Slovenia and El Salvador.
