Reflect Orbital sells sunlight from orbit to solar farms and large-scale lighting applications after sunset using a very large constellation of in-space reflectors. More hours of sunlight translates into higher solar energy production for existing solar farms and other economic benefits.

Reflect Orbital: Sonnenlicht auch nachts durch Sonnenspiegel. Solarfarmen konnten von der Technologie der weltallgestutzten Sonnenspiegel profitieren. In den Dammerstunden wurde es dann mehr

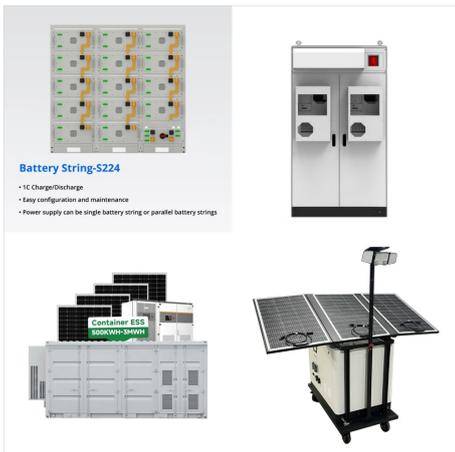

This autonomous operation will allow Reflect Orbital to provide sunlight on demand, even in remote or off-grid locations. An undeniable potential. The potential applications of Reflect Orbital's technology are vast. In agriculture, concentrated sunlight could be used to accelerate plant growth, improve crop yields, and reduce the need for
