ROLLER SHUTTER BATTERY BACKUP

UPS (Uninterruptible power supply) or battery backup. This device is designed and supplied mainly in conjunction with our single phase 230v fire shutters to allow the door to close (or open) on receipt of a fire signal, it's also used when a 230v shutter is a final exit from a building and if a use of a manual override device would compromise security.

A fully charged battery backup should operate a standard size shutter a couple cycles over a few hours before it's empty. If you have shutters that is using a battery backup every 6 months turn the power off from the circuit breaker to check that the battery backup is still working and also to wake up the battery in the battery back up this helps extend the life of the battery if you have

This is why we strongly recommend a battery backup for every roller shutter system that will allow you to operate your shutters even when your power cuts out! Volts Matter. At Reno Saver, all of our roller shutter systems are installed with 12v of power, meaning that their batteries are rechargeable and can last for eight days after charging to
