

What is solar for Samoa?

The Solar for Samoa project set the benchmark for quality solar power projects in the South Pacific. The two sites will provide up to 27% of the network power during peak output. MPower has successfully delivered a wide range of renewable and conventional power systems across the region.

Who managed the Solar for Samoa project?

The project was managed by MPower's construction manager, project manager and HSE managers and carried out by local staff (peaking at 220) in Samoa with regular visits from MPower's team in Sydney. The Solar for Samoa project set the benchmark for quality solar power projects in the South Pacific.

Does Samoa have a solar power station?

MPower was awarded a contract to deliver a fully operational 5.0MW solar power station across two sites in Samoa. The first site at Faleolo International airport has a 3MWp solar PV ground mount system. The second site at Faleata Race Track has a 2MWp solar PV group mount system.

The six key parameters in the study are a) solar field size (A_{field}) varying from 200,000 m² to 1,000,000 m² in increments of 100,000 m²; b) TES capacity varying from 4 h to 16 h in 2-hour increments; c) solar multiples (SM) varying from 1.0 to 3.0 in 0.5 increments; d) power block capacity varying from 50 to 200 MW in 25 MW increments; e

Figure 1-1 Samoa's Installed Power Capacity (MW) in 2022 Renewable Energy Status As of 2022, total installed capacity of the renewable energy plants in Samoa was 31.61 MW. Overall, hydro power plants account for 15.64 MW (or 50%), solar accounts for 14.67 MW (or 46%), wind contributes for around 0.55 MW, while biomass is approximately 0.75 MW.

In this study, a novel solar-driven system that integrates freshwater, hydrogen, electricity co-generation is proposed. The specific model of the entire integrated system is determined using Aspen Plus software. The operational parameters of the system are established based on the meteorological data from Hainan, China. The system undergoes
