The solar revolution in Senegal has been greatly aided by breakthroughs in solar technology as well as financial support. Solar panels are now substantially more efficient, allowing for the production of more electricity from a less surface area.

Solar power plants in Senegal form part of the strategy for increasing access to electricity, focusing on regenerative sources. Senegal's government wants to become an emerging economy by 2035 and the energy sector is one of the major components of Senegal's growth. Rural areas remain the most challenging areas to install power grids.
