

What is Singapore's first large-scale Bess system?

Singapore's first large-scale BESS, a 2.4MW/2.4MWh system was supplied and installed by W&A; in October 2020 and participates in the wholesale market as well as reducing peak demand at a substation.

What is a Bess & how does it work?

The BESS will help buffer the site's energy systems from spikes in demand, in much the same way that stationary batteries at electric vehicle (EV) charge stations increase the availability of power for multiple users charging their cars quickly while protecting the grid from impacts of demand spikes.

What is a Bess unit & how does it work?

Whenever a surge in energy consumption is forecasted, the BESS unit will be activated to supply energy to help meet demand, they added. At other times, the unit can be used to provide ancillary services to Singapore's power grid and generate revenue.

What are the benefits of a Bess system?

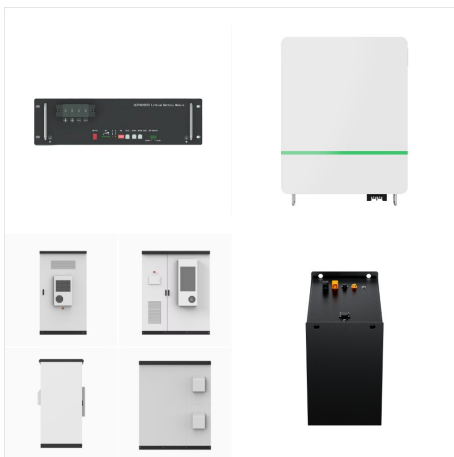

The compact and robust BESS can be deployed for floating platforms, vessels, and other industrial areas, resulting in huge fuel savings, reduction in vibration, noise, emissions, prolong maintenance intervals and higher operations efficiency.

How can a business benefit from Bess?

With BESS, businesses can potentially shift their electricity consumption more flexibly from peak to non-peak periods and participate more frequently in DR. EMA has published the Final Determination Paper on the regulatory framework.
