

Are cactus batteries still useful?

When Cactus launched in 2021, second-life batteries were the most cost-effective component for BESS applications. But today, new lithium iron phosphate cells have become cheap enough to replace the old Teslas in most new storage units. Nonetheless, the elderly batteries still play a useful role.

Does cactus have a second-life battery?

With the new cash injection, Cactus plans to build a portfolio of over 1,000 storage systems. For the Tesla batteries, however, the second job is not guaranteed forever. When Cactus launched in 2021, second-life batteries were the most cost-effective component for BESS applications.

What is cactus & how does it work?

The concept is the brainchild of Cactus, a startup based in Finland. Cactus converts the batteries into smart electricity storage units, which optimise energy consumption. Investors are providing growing backing for the approach. Cactus today announced that it's raised over EUR26mn in equity funding, which the startup will use to build more units.

Why is cactus a good investment?

A volatile energy market, increasing uptake of EVs, and the growing production of solar power have boosted the demand for smart energy storage systems. Investors in Cactus highlighted the impact of the green transition, which requires electrification across all sectors of society.

Are Tesla Batteries A good replacement for a cactus battery?

For the Tesla batteries, however, the second job is not guaranteed forever. When Cactus launched in 2021, second-life batteries were the most cost-effective component for BESS applications. But today, new lithium iron phosphate cells have become cheap enough to replace the old Teslas in most new storage units.

Why should you choose cactus?

Cactus supplies the finished units as an all-inclusive service. Once installed, the system promises clients a hedge against price volatility, reduced consumption during demand peaks, backup power, and optimal use of the property's electricity production. Global trends have added further selling points.

Battery storage systems can be used for numerous roles in terms of grid services and localised uses. From a Grid services perspective, these applications range, from short-term balancing of ???
