

Built for 99.999% service availability. Built-in redundancy using a chassis-based system with discrete data and control planes, field-serviceable power supplies and internal solid-state disks, integrated replication of messages, state, queues, and configuration and ???

Jinko Solar Co., Ltd. (hereinafter "JinkoSolar", NYSE: JKS) is a global solar technology leader characterized by integrated research, development and manufacturing of photovoltaic products. JinkoSolar serves more than 200 countries, is a global leader in photovoltaic sales, and pioneers "vertical integration" in production.

Solace enables an event mesh with PubSub+, our advanced event brokers. You create an event mesh with Solace by deploying PubSub+ in any/all your environments (public/private clouds, on premises), and then connecting them, at which point all applications, microservices, cloud services, SaaS, iPaaS and legacy systems connected to an event broker in the mesh will be ???

Solace (formerly Solace Systems) is a middleware company based in Kanata / Ottawa, Ontario, Canada, that manufactures and sells message-oriented middleware appliances and software that routes information between applications, devices and user interfaces.. Solace was founded in 2001 by Craig Betts, with the idea of embedding messaging functionality in hardware.

This course provides your essential training for designing and developing solutions for an Event Driven Architecture. Through this course, you will learn the basic concepts of an event-driven architecture, Solace's event driven methodology, and how to apply these concepts to your application architecture and solutions.

What Is Solace PubSub+ Platform?. Solace PubSub+ Platform is a complete event-driven management and streaming platform for the real-time enterprise. The platform helps enterprises design, deploy, integrate, and manage event-driven architectures (EDAs) across hybrid cloud, multi-cloud, and IoT environments, so enterprises can be more integrated and event-driven.

How PubSub+ extends and enhances Azure Cloud. PubSub+ is event broker technology that enables event-driven interactions between applications and microservices running in public and virtual private cloud environments from Azure, AWS and GCP, in private clouds such as PCF or OpenShift, and on-premises.
