Camping has changed with the introduction of solar powered tent and solar generator-powered tents. These new shelters offer more comfort and convenience for outdoor enthusiasts. However, there are many types to choose from, which can be confusing. In this guide, we will provide a beginner's guide to these two tents.

Tent fumigation, often called "tenting," is a method used to treat severe pest infestations, most commonly termites, bed bugs, and other pests. While it is a highly effective treatment option, it also comes with many questions, given its invasive nature. This post sheds light on the most commonly asked questions about tent fumigation. What is Tent Fumigation? ???

The two companies plan to make use of new technology--solar fabric or textile to make solar tents. Solar fabric, also known as photovoltaic fabric or solar material, incorporates solar cells or photovoltaic (PV) cells into its structure, allowing it to generate electricity from sunlight.

Although the weight difference has lessened with the development of new materials and designs, larger tents are often heavier. And with solar-powered tents that some are made from fiberglass tent poles, these could be heavier and stronger. Those made from aluminum, however, offer a lightweight but less durable option.
