

When is a total solar eclipse 2024?

On April 8, 2024, a total solar eclipse will traverse North America bringing a period of midday complete darkness to 12 U.S. states and affecting solar power plants across all 50 U.S. states.

Will 2024 be the best solar eclipse ever?

His special skill is turning tech-babble into plain English. The total solar eclipse of 2024 will be visible across Northern America on April 8. It could be the best eclipse for hundreds of years. Here's why.

Will darkness affect solar power in April 2024?

Darkness from April's eclipse will briefly impact solar power in its path. What to know. Editor's note: An updated cloud forecast for the April 2024 total solar eclipse is in. Read the latest eclipse forecast and news as of Wednesday, April 3.

When is the next total solar eclipse?

After the total solar eclipse on April 8, 2024, the next total solar eclipse that can be seen from the contiguous United States will be on Aug. 23, 2044. We can't normally see the corona - the Sun's outer atmosphere - because the Sun's surface below it is so much brighter.

Will 2024 eclipses improve data quality?

Others will benefit from observations gathered while the sun is near its solar maximum, allowing for comparisons to the more quiescent phase that the sun was in during the 2017 eclipse. All the 2024 experiments should enjoy the improvement in data quality and quantity that comes with the longer viewing time.

What will happen to the Sun in 2024?

What's more, the sun will be close to solar maximum in 2024. That's the peak of its roughly 11-year activity cycle. As a result, lots of bright, petal-like streamers of plasma will extend from the solar corona, the sun's outer atmosphere.
