Solar The central region of El Salvador receives a high level of solar radiation (5.3 kWh/m²/day). Therefore photovoltaic systems are an opportunity to take advantage of the country's vast solar resources. Most solar panels are installed in government buildings, schools, and universities. The capacity of the largest photovoltaic system is 99 MW.

While most of El Salvador has reliable electricity access, there is little prospect of the national electric grid being extended to the village of El Sauce. Solar energy products identified. Using the information gathered during the assessment, we identified solar power and lighting systems that would be comparable to what residents

The development of high temperature solar thermal systems has also been considered. Studies indicate that the potential of this type of energy is high in El Salvador and, although the initial investment cost is still high, there are future development plans for concentrated solar energy.
