Does the European solar PV industry need to start from scratch?

Although it is currently small, the European solar PV industry does not have to start entirely from scratch (Exhibit 3).

Will Europe become a major solar-PV market?

Germany alone aims to install 215 GW by 2030, adding 160 GW of new capacity on top of the current 58 GW, almost scaling the market by a factor of four. 2 With these ambitions in place, Europe would maintain its position as one of the major solar-PV markets in the world, alongside China, India, and the United States.

Europe's solar-panel makers now want a financial lifeline from European taxpayers. Measures suggested have included import tariffs, subsidies to domestic production and buying excess inventories. But tariffs or any measures to block trade would be a mistake, as the EU should know. In 2013, it imposed tariffs on Chinese solar panels following

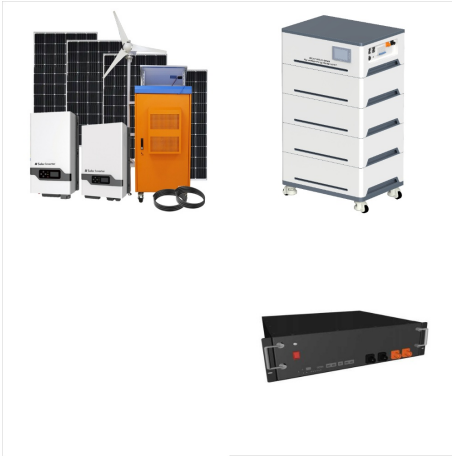

Europe aims to install 750 GW of solar-PV capacity by 2030, but faces a supply resilience risk from China. Learn how European companies are responding and what it will take to compete in the global solar-PV industry.
