

In this article, we will explore in detail the price of solar panels in Spain and provide an up-to-date guide for those interested in installing a solar system in their homes or businesses. What are solar panels?

The cost of solar panels in Spain varies significantly based on the type you choose. Common options include monocrystalline, polycrystalline, and thin-film panels, each with different price points and efficiency levels.

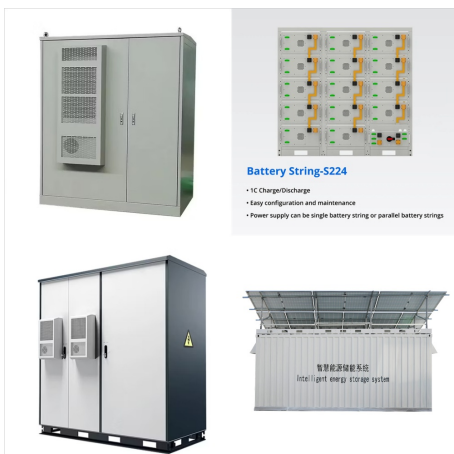

This solar energy price includes: 28 panels (460wp, PERC tech), 28 support units with reinforcing support, 2 inverters of 6kw with total 2mppt, electric meter and all needed electrical material, transport-delivery-installation and the engineer project and permits.

We've prepared a .pdf comparing the estimated electricity bill of a typical villa in Spain with solar panels on each of Spain's top 25 feed-in tariffs and 8 virtual battery plans. The data comes from Spain's consumer defence organisation (OCU) and estimates the annual electricity bills for three different scenarios:

Adding a solar battery to an existing system typically costs around 500-600 euros. However, if you're installing solar panels for the first time, combining the battery installation with the overall PV system can save on costs.

However, the price rises by up to 30% if homeowners opt for self-consumption solar panels with storage. In this case, the surplus energy is charged in a battery and supplied when needed. "The kilowatt hour is more expensive, but the independence from the grid is 98%," explained Solarmassel MD, Thorsten Massel.
