The Earth intercepts a lot of solar power: 173,000 terawatts. That's 10,000 times more power than the planet's population uses. So is it possible that one day the world could be completely reliant on solar energy? Richard Komp examines how solar panels convert solar energy to ???

In this article, we will explain how solar panels work and provide an animation to help you understand the process. What are solar panels? Solar panels are made up of photovoltaic (PV) cells, which are made of silicon. When sunlight hits the PV cells, it causes electrons to move, creating a flow of electricity. This process is called the

How Solar Panels Work - A Cool Animated Infographic. Humans have been trying to harness the sun's energy for most of history, but it was the invention of the first photovoltaic cell by French physicist Edmond Becquerel in 1839 that finally made solar energy possible on a grander scale.
