Solar power banks are small devices created with solar panels that collect and convert the energy of sunlight into usable power. This power is converted to electricity that can be used to power common devices such as cellphones, tablets, iPods, battery chargers, and laptops.

mAh High Capacity: The solar power bank charges up 8-10 times for your phone and 3-4 times for your tablet, and it can be used for 9 days on average per charge. 4 Large Solar Panels: Its solar charging rate can reach 6W due to 4 highly efficient solar panels, which is equivalent to the speed of a 1A charger.

Portable solar power banks are useful for people who enjoy spending lots of time outside, away from traditional power sources. Larger solar banks can be used to store clean energy for use when the sun isn't shining. Both options can be good in emergency situations when the electricity goes out.
