

Indiana solar installers knew their customers would be worse off when new, reduced rates for surplus solar generation took effect on July 1. But changes being ushered in by utilities go far beyond what the industry had been bracing for, say solar and consumer advocates who are now challenging regulators' interpretation of a 2017 law that gutted net metering.

And as a result, the industry is growing in the Hoosier state. Between 2018 and 2019, Indiana's wind power generation increased by 14%, according to a report from the American Wind Energy Association that released last year, making it the seventh-fastest growing state in the country.

We build community, resilience, and skills through solar power. Go Solar Volunteer Meet the Families. The price of solar installations has dropped dramatically in recent years, yet people with fixed or limited income still cannot afford to buy in, and typically do not qualify for the federal renewable energy tax credit.

In October, 2024, the typical price per watt of solar panels in Indiana is \$4.05/W. Stemming from this cost, expect costs to be \$4,050, on average, for every 1 kW (or 1000 watts) of solar energy your solar panels can generate.

The average price per watt of solar power in Indiana is \$3.28/W. These prices are before incentives. After the federal solar tax credit, the final cost will drop by 30%, down to \$26,200 for a 11.41 kW system.
