

What is MOSJ - environmental monitoring of Svalbard & Jan Mayen?

MOSJ (Environmental Monitoring of Svalbard and Jan Mayen) is an environmental monitoring system and part of the Norwegian Government's environmental monitoring in Norway. The site provides historical climate records (ocean, land, and atmosphere), including temperature, precipitation, snow, permafrost and sea-ice.

What is a solar rectifier?

The solar rectifier features low maintenance, lightweight design, and optional remote monitoring. Used in two different ways with or without a transformer. Would you like to receive Solar Rectifier System products and services for your projects?

Does ice affect the temperature in Svalbard?

The temperature in Svalbard is strongly affected by ice, which can vary widely from year to year. Hence, the seasons with ice present show greater variation in average temperature from year to year. Trends in seasonal mean temperatures at Svalbard Airport shows a temperature increase for all four seasons.

What is the longest data series from Svalbard Airport?

The longest data series is from Svalbard Airport, and started in 1898. It shows periods of rising temperatures from 1915 to the 1930s and 1970 until today, but cooling from the 1950s to about 1970. When the period is viewed as a whole, the temperature on average has risen by 0.32°C per decade.

In the remote Svalbard archipelago of Norway, situated in perpetual winter darkness, a ground-breaking project has been completed: the installation of the world's northernmost ground solar panels. This innovative initiative holds the ???
