How far away from the house must my generator be placed?

How do you choose a standby generator?

Standby generators have systems that monitor power supplied by a utility and start automatically in the event of an outage. Picking a generator depends mainly on the size of your home and what you wish to power. The average house will take at least 5,000 to 7,500 watts to run only the most critical equipment--think fridge, heat, and water.

Should you buy a home standby generator?

"A home standby generator is the single best tool available to use as a source of backup power," says Misha Kollontai, a test engineer who works in CR's generator testing program. "But because of the costs, including installation, it's also important to get a model that delivers steady, reliable power."
