

The Renewable energy strategy and investment plan (RE ???SIP) provides a way forward for strengthening the renewable energy sector in the Solomon Islands, highlighting the potentials and investments for the renewable energy options, resources and technologies.

The Solomon Islands National Energy Policy : 2019 - 2030 contains strategic direction and key priorities for the development of the energy sector in the next 10 years which will enable a transition to sustainable economic development in the country.

Stellae Energy, a UK-based Green Energy Solutions and Assets company, has made significant progress following the signing of a detailed Memorandum of Understanding with the Solomon Islands in 2023. The MOU ???

UK-based Green Energy Solutions and Assets Company Stellae Energy Ltd (Stellae) has reported significant progress on the proposed geothermal power project in the Solomon Islands, which is initially targeting a 30-MW capacity development.

Solomon Islands needs better, domestic access to energy and affordable energy will support economic development. The capital of Honiara has a population of ~85,000 with a developed economy but adversely affected by the high price of electricity. The island of Guadalcanal has an additional distributed population of ~80,000.

The Solomon Islands National Energy Policy : 2019 - 2030 contains strategic direction and key priorities for the development of the energy sector in the next 10 years which will enable a transition to sustainable economic development in ???

Stellae Energy, a UK-based Green Energy Solutions and Assets company, has made significant progress following the signing of a detailed Memorandum of Understanding with the Solomon Islands in 2023. The MOU aims to explore and develop economic, sustainable geothermal power projects harnessing volcanic geothermal energy resources in partnership

UK-based Green Energy Solutions and Assets Company Stellae Energy Ltd (Stellae) has reported significant progress on the proposed geothermal power project in the Solomon Islands, which is initially targeting a 30-MW capacity development.

This partnership represents a major step towards sustainable energy solutions for the Solomon Islands, capitalizing on the country's abundant island arc volcanic geothermal resources. Volcanic geothermal systems can potentially produce up to ~100 MW of energy from individual volcanic structures with both shallow and deep resources.

UNITED Kingdom (UK) in partnership with the Ministry of Mines, Energy and Rural Electrification has launched a technical assistance facility to support Solomon Islands to establish an independent energy regulator.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided
