

Do I need a backup sump pump?

To prevent these situations from happening, a backup sump pump battery system is always highly recommended. A backup sump pump battery system is essentially an alternative source of power accessible to the sump pump at all times in case it loses its primary source of electricity.

Do I need a battery backup sump pump?

We would always recommend that every basement sump pump system must have a Battery Backup system in place. This means that even if there is a power failure the Battery Backup will kick in to pump away water. Battery Backup systems are an integral part of the whole waterproofing system.

Do you have a sump pump backup?

Yes, this is possible to do. You can run the sump pump with an inverter. But it is important to note that not all inverters are made for running a sump pump due to the high power demand. It is also important to have a battery back up system in place for when the power goes out. This will ensure that the sump pump will keep running.

Does a sump pump need regular maintenance?

While a sump pump doesn't require a lot of upkeep, it is important that you schedule regular maintenance to make sure that you do not have damage done to your sump pump. The alternative is a wet basement and damaged possessions. Even though it might seem as though you should be able to forget about your sump pump once it's installed, you should arrange for cleaning and maintenance to keep it fully operational.

**How Does a Battery Backup Sump Pump Work?** A backup sump pump will monitor the primary sump pump and detect when it has failed. Primary sump pumps can fail due to many reasons, but a power outage is the most common. In either case, the backup pump will kick on using DC battery power. Some backup pumps can also run on AC power from your utility.

PumpSpy's Primary Sump Pump Battery Backup Power System is an ideal solution for homeowners worried about keeping their basements dry during a power outage. Engineered to reliably handle either one Primary Sump Pump (12.5 Amps MAX) or two Primary Sumps simultaneously (with a combined Amp draw not exceeding 12.5) with a pure sine wave output

The backup is designed to kick on automatically if your power or sump pump fails, which means you don't have to worry about sleeping through a power outage to wake up to a flooded basement. Battery backups also earn points for offering a substantial pumping volume, which is important if a power outage is due to a storm that's driving water

A battery kept continually charged by the backup system operates a separate pump linked to the discharge pipe, providing hours of protection until power is restored. Some backup pumps even monitor the condition of the battery and alert you when it needs to be replaced. Hybrid models combine a regular sump pump with a battery backup option, as
