Of the 237,397 containers that brought import goods to the Sirsiya ICD in the past 13 years, only 8,638 containers carried back Nepal's exports. The number of containers entering Nepal has been increasing every year, but as the containers have to return empty, traders are forced to pay for their return journey as well. Capacity constraints

The difference between a container and a full-fledged VM is that all containers share the same kernel of the host system. This gives them the advantage of being very fast with almost 0 performance overhead compared with VMs. They also utilize the different computing resources better because of the shared kernel.
