Step (3): Next, on the Edit Plan Settings, click on the Change advanced power settings link. Step (4): On the Power Options dialog box, expand the Hard disk and Turn off hard disk after option. Step (5): After that, click on the On battery and Plugged-in option and then select Never from the drop-down menu.

I do no have crash at all. My computer shuts down (apparently) without any issue. Then, on next boot-up (which is happening flawlessly), I have the message in my Event Viewer. That's why I titled my post "False Kernel Power Event ID 41 (63) reported" ;) I will dig through the Event Viewer to see if there is anything related to that (false) event.
Oltre a quanto sopra, si pu? anche incontrare il codice di arresto come "Kernel Power Event ID 41 (63)". Perch? si verifica l''errore Kernel-Power 41? Ci potrebbero essere diverse ragioni dietro questo errore, tra cui: Mancanza di alimentazione sufficiente; Guasto hardware; Overclock del sistema; Errori di memoria; BIOS obsoleto
