

Why did Global OTEC choose a floating barge design?

Global OTEC says it chose a floating barge design because onshore OTEC plants "require several multi-kilometer pipes fixed to the seabed" to facilitate the acquisition and safe discharge of water. Water pipes, it noted, "represent one of the largest cost centers of an OTEC plant."

What types of power generation systems does OTEC use?

In addition, OTEC typically leverages three main types of power generation systems: a closed cycle, an open cycle, or a hybrid of the closed and open cycles.

Does OTEC provide continuous power?

OTEC has been proven to provide continuous power as well as fresh drinking water and cold water for refrigeration. But while more than a dozen prototypes have been tested intermittently since the first experimental 22-kW low-pressure turbine was deployed in 1930, no commercial-scale plants exist.

Will KRISO move K-OTEC 1000 barge power cycle equipment to Kiribati Island?

The Korean Research Institute of Ships and Ocean Engineering (KRISO) plans to relocate its 1-MW K-OTEC 1000 barge OTEC power cycle equipment, tested near Pohang, South Korea, to Kiribati Island. Courtesy: KRISO
