The adjoining solar facilities will provide a total of 140 MW solar capacity. The solar-plus-storage system is expected to fulfill 30% of the islands" energy consumption needs. According to the Department of Energy (DOE), the U.S. Virgin Islands have heavily relied on fossil fuels to generate electricity in the past.

The U.S. Virgin Islands (USVI) includes the three main islands of St. John, St. Thomas, and St. Croix. The U.S. territory has a population of about 87,000 000 (U.S. Census Bureau 2022), and the primary industry is tourism (CIA 2023) . USVI is highly reliant on fossil fuel for their energy and all fuels are imported.

For many, the idea of switching to solar can feel out of reach financially. That's where the Federal Investment Tax Credit (ITC) comes in to level the playing field. Currently, this credit covers 30% of the cost of your solar system, including installation. That's a massive chunk of the cost knocked right off your bill, making solar more affordable for families across the USVI.

Solar for All -The SFA Program has the power to transform USVI's residential energy landscape, addressing residents" high electricity costs while creating new opportunities for energy resilience and reliable, affordable, clean power for communities most in need.
