What is a UPS Power Supply? A uninterruptible power supply or uninterruptible power source (UPS) is an electrical apparatus that provides you with emergency power to a load when the input power source or mains power fails in cases of power outages or load shedding. A UPS differs from an emergency power system or standby generator as it provides near-instantaneous a?|

A UPS works by converting AC power to DC power and storing it in a battery. Then, it converts the DC power back to AC power, running it to your building's AC outlets. Your connected devices will continue to operate on the stored battery power, giving you time to save your work and shut down the computer.

Key learnings: UPS Definition: A UPS (Uninterruptible Power Supply) is defined as a device that provides immediate power during a main power failure.; Energy Storage: UPS systems use batteries, flywheels, or supercapacitors to store energy for use during power interruptions.; Types of UPS: There are three main types of UPS: Off-line UPS, On-line UPS, a?|
