

Who is solpex energy?

Solpex Energy is a global project developer who creates wealth and added value, carrying out projects in the renewables sector. We focus on solar and wind power as a clean and inexhaustible energy source.

What stages of a project can solpex energy work at?

We have the capability to work at every phase of a project: early stages of development, feasibility, design, tenders, construction and asset management. Solpex Energy is a global project developer who creates wealth and added value, carrying out projects in the renewables sector.

How much energy does Uruguay need?

The Solution to Intermittency Renewable sources--hydroelectric power, wind, biomass, and solar energy--now cover up to 98% of Uruguay's energy needs in a normal year and still over 90% in a very dry one, according to Méndez.

How will wind power affect Uruguay's future energy supply?

The current 6% private contribution to the generation park is expected to increase as investments in new wind power plants materialize. Renewables could play a role in future energy supply, in particular wind power, allowing Uruguay to reduce its dependence on imports.

How does the electricity sector work in Uruguay?

The electricity sector of Uruguay has traditionally been based on domestic hydropower along with thermal power plants, and reliant on imports from Argentina and Brazil at times of peak demand.

What is the future of energy in Uruguay?

Credit: FRV Future Renewable Vision. After hydropower and wind, biomass is another important energy source, accounting for 15-20% of the electricity Uruguay produces. Wood pulp plants, for example, are now burning organic waste to produce energy for the grid, turning what was an environmental liability into an energy asset.

Held up as a case study for successfully transitioning away from fossil fuels, Uruguay now generates up to 98% of its electricity from renewable energy. The country offers lessons in energy sovereignty and the importance ???

??????,Solex Energy,GMEE SC Solar??? ,10""???
???

The objective this project is to increase the demand for and competitive supply of energy efficiency goods and services, contributing to improved efficiency of energy use, reduced reliance of the Uruguayan economy on imported electricity ???
