

What is a modular vertical storage solution?

Created to make the most of available vertical space and save floor space at the same time, Modula automated vertical storage solutions are suited to any type of product, in any industry sector or environment, and can be customised to various payloads, heights, sizes and options.

Do vertical storage solutions increase workforce productivity?

In fact, industry studies have shown that vertical storage solutions can increase workforce productivity by up to 85%, as one worker is able to handle the same volume of work previously performed by multiple operators. VLMs deliver the items to the operator location where the picking or replenishment operations take place.

How does vertical storage work?

Vertical storage solutions can also easily solve this problem, as they automatically deliver parts to the picker, rather than having the picker go and locate the parts within long aisles of shelving and cabinets. Walking time for parts retrieval is reduced up to 70% when compared to static shelving.

Why should you choose Modula automatic vertical storage solutions?

Modula automatic vertical storage solutions are designed to save space and time and improve process efficiency. The automatic vertical tray warehouses were designed according to the "goods-to-man" principle: there is no need for operators to move around the warehouse to pick or refill your goods.

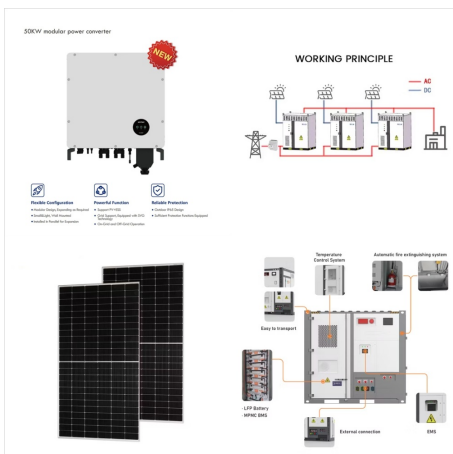

Created to make the most of available vertical space and save floor space at the same time, Modula automated vertical storage solutions are suited to any type of product, in any industry sector or environment, and can be customised to various payloads, heights, sizes and options.

VERTICAL STORAGE SOLUTIONS
