The primary advantage of solar energy is that it freezes your energy costs at a low rate for 25+ years, effectively shielding you from energy price increases. Here's how buying a solar system compares to paying for grid electricity looks for the average American household:

Why is solar energy important?

Solar energy creates free, renewable power from the sun. It's abundant and produces no carbon emissions or local air pollution. Still, about 60% of the electricity that power plants generate in the U.S. comes from fossil fuels like coal and natural gas, which we know contribute to issues related to global warming and climate change.

How do solar power systems save money?

Solar power systems save money by reducing how much energy you need to buy from the grid. In areas with net metering policies, you can even sell excess energy your solar panels generate to your utility, saving you even more money! Electricity prices are high and only keep getting more expensive.
